Product Update Storm Water Cooler

Form 1612005

Crystal Mountain, as part of its emphasis on continuous improvement, has made a change to the door used on the Storm cooler. The part previously had a high gloss finish to the door. The new door has a matte finish which is less likely to show scratches and dings that might occur through handling. In the photo below, the cooler on the left has the older style, high gloss doors while the unit on the right and in the detail photo has the matte finish. All new coolers and replacement parts will transition to the matte finish once stock is depleted. Part numbers will remain the same. Contact your Crystal Mountain representative if you have further questions.
